Christopher Uzochukwu

SENIOR SOFTWARE ENGINEER | GO, TYPESCRIPT, APPLIED AI & INTERNAL PLATFORMS

Abuja, Nigeria (GMT+1) | christopheruzochukwu8@gmail.com | linkedin.com/in/chris-uzor

PROFESSIONAL SUMMARY

Senior software engineer with 9+ years of experience building backend services, full-stack products, integration platforms, internal tools, and data-intensive workflows for globally distributed teams. Production experience across Go, Python, TypeScript, JavaScript, React, PostgreSQL, SQL, AWS, Docker, messaging, testing, and observability. Built a Go service that processed more than 600GB of Parquet data at approximately 10x the previous throughput, operated APIs handling 500K+ daily requests at approximately 99.999% uptime, and delivered 25+ integrations supporting 1,000+ properties. Built an AI-assisted incident-investigation workflow that reduced representative complex investigations from as much as three days to approximately one hour. Known for translating ambiguous operational needs into secure, tested, observable systems and communicating clearly with technical and non-technical colleagues in asynchronous remote environments.

CORE EXPERTISE

Go | Python | TypeScript & JavaScript | React | PostgreSQL & SQL | Backend Services & REST APIs | Internal Tools | Data Integrations & Workflows | Applied LLM Features | Distributed Systems | AWS & Cloud Delivery | Docker & Linux | Redis & RabbitMQ | Automated Testing | CI/CD | Observability | Security | Technical Writing | Mentoring

PROFESSIONAL EXPERIENCE

Yakili | Senior Backend Engineer (Part-time) | Remote | Jul 2026 - Present

- Build backend capabilities for an AI-powered teacher platform using Python, FastAPI, PostgreSQL, Celery, Redis, MinIO, and external AI integrations, turning educator workflows into structured, reusable product features.
- Own asynchronous workflows across internal and external systems with explicit validation, retries, failure handling, data-integrity controls, and operational visibility.
- Contribute to secure service design involving signed entitlements, device binding, replay prevention, revocation, and offline activation.

Mews | Software Engineer | Remote | Sep 2025 - Aug 2026

- Built and optimized 25+ hotel, payment, and operational integrations serving 1,000+ properties at approximately 99.95% reliability; stronger contracts and regression tests reduced production defects by 60%.
- Built a Python-based incident-investigation workflow that correlated logs, traces, API responses, support tickets, and database evidence, reducing representative complex investigations from as much as three days to approximately one hour.
- Implemented structured outputs, permissions, uncertainty controls, step tracing, error categorization, and human review so AI accelerated diagnosis without replacing engineering verification.
- Partnered with product, support, and operations colleagues to translate incomplete reports into reproducible evidence, written technical decisions, and durable product improvements.

Flexkeeping (acquired by Mews) | Software Engineer | Remote | Mar 2023 - Aug 2025

- Built and operated APIs handling 500K+ daily requests with approximately 99.999% uptime; improved PostgreSQL query performance by 30% through profiling, indexing, execution-plan analysis, and query changes.
- Engineered nine third-party integrations and redesigned core service interfaces to improve maintainability, scalability, and failure isolation.
- Raised automated test coverage from 45% to 95%, reduced escaped production bugs by 30%, and cut mean time to resolution from approximately two days to four hours.
- Participated in production support and used logs, metrics, traces, database inspection, and controlled reproduction to diagnose failures across service boundaries.

Aardvark | Senior Software Engineer | Remote | May 2022 - Feb 2023

- Co-architected two core microservices with the CTO, supporting 100+ requests per second and continued product growth.
- Built production Python services with 90% test coverage and redesigned database architecture and access patterns to improve throughput by approximately 70%.
- Delivered customer-facing React and backend workflows, automated AWS/Chalice deployments to reduce deployment time by 70%, and mentored three engineers through design reviews and implementation feedback.

PROFESSIONAL EXPERIENCE (CONTINUED)

OpenTeams | Software Engineer | Remote | Apr 2021 - Apr 2022

- Built a production Go service that incrementally converted more than 600GB of legacy Parquet data at approximately 10x the previous throughput using bounded concurrency, resumable processing, and explicit recovery paths.
- Developed complex SQL queries and stored procedures, improving critical database operations by approximately 60%.
- Built Python reporting services and improved the open-source SCRUD Django package, increasing query efficiency by 40% across five internal projects and strengthening reusable API generation.

JuiceServe | Software Engineer | Remote | Mar 2020 - Mar 2021

- Architected three RabbitMQ-connected microservices for real-time event streaming, asynchronous coordination, and failure isolation.
- Built a FastAPI service using Python asyncio and WebSockets for concurrent connections to 100+ electric-vehicle chargers.
- Operated Dockerized services handling 50-200+ requests per second with structured error handling, asynchronous logging, and production troubleshooting.

OpenSupermall | Full Stack Software Developer | Remote | Dec 2016 - Feb 2020

- Built and maintained retail, marketplace, reporting, and real-time point-of-sale products across JavaScript/PHP frontends, backend services, APIs, and database layers.
- Optimized database queries and application logic, improving response speed by approximately 5x.

SELECTED DIGITAL WORKPLACE IMPACT

AI-assisted operations: Built a Python investigation workflow that correlated logs, traces, API responses, support tickets, and database evidence. Added permissions, uncertainty controls, step tracing, error categorization, and human review so AI reduced investigation time without replacing engineering judgment.
Data and developer tooling: Built a resumable Go data-processing service for 600GB+ of Parquet data and improved OpenTeams' open-source SCRUD Django package for semantic REST API generation across five internal projects.
gitlab.com/openteams/scrud-django

TECHNICAL SKILLS

Languages: Go, Python, TypeScript, JavaScript, SQL, Bash, PHP, C#, Java
Product & backend: React, Vue.js, FastAPI, Django, Node.js, Express, REST APIs, microservices, asyncio, WebSockets, Celery, internal tools, external integrations
Data & messaging: PostgreSQL, MySQL, SQL Server, MongoDB, Redis, RabbitMQ, schema design, migrations, indexing, query optimization, reporting, Pandas, Parquet
Cloud & operations: AWS, GCP, Azure, Lambda, AWS Chalice, Docker, Linux, Git, CI/CD, automated testing, structured logging, metrics, tracing, monitoring, incident response
AI engineering: LLM APIs and coding agents for product workflows, architecture exploration, implementation, debugging, test generation, code review, documentation, and automation; validation through structured outputs, tests, source evidence, permissions, human review, and production monitoring

EDUCATION

Bachelor of Science in Computer Science | Imo State University, Owerri | 2016
