Christopher Uzochukwu

SENIOR SOFTWARE ENGINEER | BACKEND, INTEGRATIONS & FULL-STACK SYSTEMS

Abuja, Nigeria (GMT+1) | christopheruzochukwu8@gmail.com
chrisuzor.github.io | linkedin.com/in/chris-uzor | github.com/chrisuzor

PROFESSIONAL SUMMARY

Senior software engineer with 9+ years of experience building and operating backend services, full-stack products, integration platforms, internal tools, and data-intensive workflows for distributed teams. Production experience across Python, Go, TypeScript/JavaScript, React, PostgreSQL, AWS, Docker, messaging, testing, and observability, with additional experience in PHP, Java, and C#. Built APIs handling 500K+ daily requests at approximately 99.999% uptime, delivered 25+ integrations supporting 1,000+ properties, and created a Go service that processed 600GB+ of Parquet data at approximately 10x the previous throughput. Comfortable taking ambiguous operational problems from discovery and architecture through implementation, deployment, monitoring, incident response, and long-term improvement.

CORE EXPERTISE

Backend Services & REST APIs | Distributed & Asynchronous Systems | Third-Party Integrations | Full-Stack Product Delivery | PostgreSQL & SQL Optimization | AWS & Cloud Delivery | Queues & Background Jobs | Reliability, Observability & Incident Response | Applied LLM Features | Automated Testing & CI/CD | Performance Engineering | Technical Writing, Code Review & Mentoring

PROFESSIONAL EXPERIENCE

Yakili | Senior Backend Engineer (Part-time) | Remote | Jul 2026 - Present

- Build backend capabilities for an AI-powered teacher platform using Python, FastAPI, PostgreSQL, Celery, Redis, MinIO, and external AI integrations.
- Own asynchronous workflows with explicit validation, retries, failure handling, data-integrity controls, and operational visibility across internal and external systems.
- Contribute to secure service design involving signed entitlements, device binding, replay prevention, revocation, and offline activation.

Mews | Software Engineer | Remote | Sep 2025 - Aug 2026

- Built and optimized 25+ hotel, payment, and operational integrations serving 1,000+ properties at approximately 99.95% reliability; stronger contracts and regression tests reduced production defects by 60%.
- Built a Python incident-investigation workflow that correlated logs, traces, API responses, support tickets, and database evidence, reducing representative complex investigations from as much as three days to approximately one hour.
- Implemented structured outputs, permission controls, uncertainty handling, step tracing, error categorization, and human review so AI accelerated diagnosis without replacing engineering verification.
- Partnered with product, support, and operations colleagues to translate incomplete reports into reproducible evidence, written technical decisions, and durable improvements.

Flexkeeping (acquired by Mews) | Software Engineer | Remote | Mar 2023 - Aug 2025

- Built and operated APIs handling 500K+ daily requests with approximately 99.999% uptime; improved PostgreSQL query performance by 30% through profiling, indexing, execution-plan analysis, and query changes.
- Engineered nine third-party integrations and redesigned core service interfaces to improve maintainability, scalability, and failure isolation.
- Raised automated test coverage from 45% to 95%, reduced escaped production bugs by 30%, and cut mean time to resolution from approximately two days to four hours.
- Diagnosed production failures across service boundaries using logs, metrics, traces, database inspection, and controlled reproduction.

PROFESSIONAL EXPERIENCE (CONTINUED)

Aardvark | Senior Software Engineer | Remote | May 2022 - Feb 2023

- Co-architected two core microservices with the CTO, supporting 100+ requests per second and continued product growth.
- Built tested Python services and redesigned database architecture and access patterns to improve throughput by approximately 70%.
- Delivered customer-facing React and backend workflows, automated AWS/Chalice deployments to reduce deployment time by 70%, and mentored three engineers through design reviews and implementation feedback.

OpenTeams | Software Engineer | Remote | Apr 2021 - Apr 2022

- Built a production Go service that incrementally converted 600GB+ of legacy Parquet data at approximately 10x the previous throughput using bounded concurrency, resumable processing, and explicit recovery paths.
- Developed complex SQL queries and stored procedures, improving critical database operations by approximately 60%.
- Built Python reporting services and improved the open-source SCRUD Django package, increasing query efficiency by 40% across five internal projects.

JuiceServe | Software Engineer | Remote | Mar 2020 - Mar 2021

- Architected three RabbitMQ-connected microservices for real-time event streaming, asynchronous coordination, and failure isolation.
- Built a FastAPI service using Python asyncio and WebSockets for concurrent connections to 100+ electric-vehicle chargers.
- Operated Dockerized services handling 50-200+ requests per second with structured error handling, asynchronous logging, and production troubleshooting.

OpenSupermall | Full Stack Software Developer | Remote | Dec 2016 - Feb 2020

- Built and maintained retail, marketplace, reporting, and real-time point-of-sale products across JavaScript/PHP frontends, backend services, APIs, and database layers.
- Optimized database queries and application logic, improving response speed by approximately 5x.

TECHNICAL SKILLS

Languages: Python, Go, TypeScript, JavaScript, PHP, Java, C#, SQL, Bash
Backend & frontend: FastAPI, Django, Node.js, Express, React, Vue.js, REST APIs, microservices, asyncio, WebSockets, Celery, background jobs, external integrations
Data & messaging: PostgreSQL, MySQL, SQL Server, MongoDB, Redis, RabbitMQ, schema design, migrations, indexing, query optimization, Pandas, Parquet
Cloud & operations: AWS, GCP, Azure, Lambda, AWS Chalice, Docker, Linux, Git, CI/CD, automated testing, structured logging, metrics, tracing, monitoring, incident response
AI engineering: LLM APIs and coding agents for product workflows, architecture exploration, implementation, debugging, testing, code review, documentation, and automation; validation through structured outputs, source evidence, permissions, automated checks, human review, and production monitoring

EDUCATION

Bachelor of Science in Computer Science | Imo State University, Owerri | 2016
